TEST	RESULT	LIMITS	LAB
HCV AB w/Reflex to RIBA			
> <u>HCV AB</u> <u>Positive</u>	73.6% s/co ratio	0.0 - 0.9	ME
Indicates past or present HCV infection; Immunoblot testing not performed. Samples with high S/CO ratios (>9.9) confirm positive (95%), but 1% out of 100 might represent false-positives. PCR testing can be requested if indicated. Qualitative HCV RNA testing will differentiate active from resolved infection.

To whom it may concern,
I am a 40 year old male (C) and need medical treatment as soon as possible to help keep it from spreading. On all attempts to get the jail to treat me or put me somewhere that I could be treated, I have been refused. And I'm in desperate need of treatment. The longer I wait the longer my treatment will last. I have been waiting since 9-15-05
